User can choose from more than 2,500 commands to draw, edit, annotate, and assemble objects. User can create views and layouts of their drawings. A drawing consists of layers, which allows us to modify an object while leaving the rest of the drawing unchanged. Layers can be turned on and off, and groups of layers can be specified for automatic working on. Object-oriented drawing AutoCAD Object-Oriented Drawing feature is an AutoLISP based extension to the drawing environment, capable of working with a hierarchy of objects. Instead of dealing with objects as a collection of line segments, you manipulate the objects as if they are real objects in the physical world. These objects can be connected with lines and arcs, their parts, and the outside space. Instead of using individual blocks to fill the shapes, the user can use groups of blocks, called borads, that together fill the drawing. Thus, the drawing becomes modular and more flexible. Autodesk DWG Converter Autodesk DWG Converter can convert various digital files formats including DWG, DXF, DWF, DGN and SLD to AutoCAD. You can also use feedback to suggest edits in your drawings. You can access a variety of feedback formats from comments left on drawings to digital PDFs that you can print to paper. Once you have input into AutoCAD, you can use the Draw command and specify your export path. This ensures your feedback will always get to the right people. The interface is very similar to the Draw command and you have the same options available. You'll see an option to export comments. You can also export comments from your virtual drawing. You can create a New Comment, open a previously created comment, or open an existing comment in a file.
