On a new empty screen, open AutoCAD 360, then select Tools > Load Translation. Select the file called "Translate" in the location you installed Autodesk Autocad. Click Load. Click OK. A window will appear with your translation file. Click OK. Save the translated file and click OK. Exit Autodesk Autocad. Save the translated file in the location you installed Autodesk Autocad. You must now have the AutoCAD 360 translation tools, the TRANSLATE command is part of it. You also have the translations listed in the drop down under Translation and it is enabled, and you also have the keygen in Autocad, but you don't have the new XEditor translation tools. Additional XEditor tools are not currently in Autocad, however, there is a free download from the Autocad site in case you need it, I did not notice anything about it, so I would make sure you read the XEditor User guide to see if the translation tools are what you need, and if so download it. Additional Autocad video tutorials are available for the new user as well. their patients. The cost of this is a trade-off between the costs of travel and the costs of time and energy, as well as the opportunity cost of the research team's time being tied up. 4.4. Sample size and recruitment {#s0055} -------------------------------- This study was powered to detect a difference in the primary outcome measure, the change in overall IPQ score. With a mean and standard deviation of 4.2 and 1.4 respectively, a sample size of 64 patients per group would detect a 0.8 point difference in mean change in IPQ score (i.e. lower in the implementation group), with 80% power (type 1 error of 5%) and 95% confidence. With this number of patients recruited, the data would have 90% power to detect a 1.4 point difference in mean change in IPQ score (i.e. lower in the implementation group), which is comparable to the size of differences in the primary outcome measure of the wider PRISM trial \[[@bb0130]\]. 4.5.
