History Automated Drafting The idea of using computers to help draft plans and drawings goes back to at least 1960. A high school teacher named Michael Spenser was able to help his students in his drafting class using punch cards (an early form of computer programming) to control a draughtsman's pen. Spenser also developed the first tool that could import and export data from a computer for drafting, a two-foot scale drafting system. In the mid-1960s, a professor at the University of Michigan named Morris Rosenfeld created software called COBOL—a combination of the terms "computer" and "batch" which meant that it could do batch processing. COBOL was used in the Rand Corporation in 1966. This was an early form of computer aided drafting, but only for simple geometric shapes such as cubes. In 1968, Rosenfeld wrote an article in the IEEE-ASME Journal on Design of Mechanical Systems that suggested that CAD could be used to draw freehand, as opposed to using a mechanical drafting machine. Rosenfeld proposed that CAD should include an "operator-assisted drawing program", which would allow a CAD operator to put shapes on a drawing. The operator would then be able to select and manipulate the shape on the screen. It would be possible to reduce the cost of drawing by using stencils and reducing the number of draftsmen needed, with each drawing being produced using templates created by computer. This is a step that was taken by William C. Ott in 1978, when he used his Visi-Draw computer drawing program to produce a dot pattern. His pattern looked like a template for a mechanical drafting machine, and it could be used to plot the path of a drafting machine. The first of these programs were sold commercially by Double Dragon Computer Products (later renamed Draxler Engineering Company), in 1976. Visi-Draw was advertised as a drafting program for use by "computer-as-draftsman". The first CAD system to use "computer-assisted drafting" as a name was ACIS (Automatic Computer Integrated Systems), developed at the MIT Auto-Able Institute. Visi-Draft (Autodesk) Visi-Draft was the first CAD program to be commercialized. First released in 1976, the program was developed by William C. Ott at the MIT Auto-Able (later renamed Draxler Engineering Company), which was later bought by Autodesk.

AutoCAD Torrent Download also supports a web service API, making it possible to interact with a model through a web browser (AutoCAD 2010/11 and later, 2012/13, 2013/14). User interface In AutoCAD LT (formerly Draw), text objects can be freely scaled and rotated in 3D space. In AutoCAD, any 3D object is "locked" into a 3D space and cannot move freely through 2D space. AutoCAD's interface consists of one or two windows. The default two-window interface is composed of the Application Window and the drawing area window. In AutoCAD LT, the Application Window and the drawing area window are combined. The drawing area window is often used for entering text and drawings (either as drawing objects, blocks or lines). The Application Window provides toolbars, menus and in AutoCAD 2012/13 and later, the Ribbon menu. The Application Window and the drawing area window can be customized, and the way the windows are laid out can be changed. The Application Window contains the menus and toolbars, which allow some interactive manipulation of the drawing objects in the drawing area window. For example, the object toolbar contains the following: Change coordinates, rotate or scale object Copy object or Add to drawing Auto-snap to, to a grid or to an object Open file, open or close model Project, export, save and print Search, search and select Window menu, View, palette, options, text tool, right click, zoom Zoom tools: Zoom all Zoom to fit Show attributes Filled or unfilled Show lines In addition, the App menu contains the following: Depending on the view and the selected drawing objects, certain items in the Application Window may be disabled. Autodesk customers may also purchase a third-party add-on toolbars that can be added to the Application Window to make editing easier. Examples include Illustrator, Photoshop and a cut-and-paste tool. Painting tools In a series of tutorials called "Painting" by Autodesk, the author shows how to create various architectural drawings, such as a curtain wall and an elevator core. It includes a series of short videos on how to create a building, a road, a parking garage and more. These videos show how to use a number of different tools. Sarkozy-Boris meeting: One in, one out French President Nicolas Sarkozy and British Prime Minister David Cameron sat down together in Paris on Tuesday to discuss the European Union's financial crisis and a reworked UK-EU relationship, according to media reports. The meeting came two days after Cameron announced plans to renegotiate Britain's membership terms, including an end to Britain's opt-outs on the UK-EU Schengen border and VAT. Sarkozy and Cameron also discussed the immigration crisis and security at their meeting, which, according to French newspaper Le Monde, involved a meeting of the two men's working groups on migration, asylum and security. Both sides agreed to continue cooperation on security and immigration, the newspaper reported. Cameron said the two leaders discussed "a new relationship between Britain and the EU" at a press conference earlier on Tuesday. "The priority will be to secure a deal that is in the interests of both the UK and the EU - a deal that will ensure that people are able to live in safety and prosperity in both our countries," Cameron said. "We are pressing ahead with the negotiations in the European Council and the days ahead will be very intense." Britain and the European Union have been locked in a "blazing row" over the UK's renegotiation, with Cameron accusing the EU of acting like the "Bolshevik Revolution" and threatening to walk away from the talks unless the bloc made concessions on immigration. "The EU has got to change," he said at the G20 summit in Mexico on Monday. "For too long, EU leaders have got it wrong and been too obsessed with the past instead of focusing on the future."
