Tess Gerritsen Ice Cold New York Times bestselling author Tess Gerritsen has thrilled Body Double, Vanish,Â .Postoperative hypothyroidism in children: a randomized trial on the effect of thyroid supplements on weight gain and thyroid function in the first six postoperative months. Although the etiology of postoperative hypothyroidism (PH) in children has not been determined, PH may be due to a reduction in thyroid activity after surgery in these children. Because thyroid supplementation may reverse PH by increasing thyroid activity, the aim of this randomized study was to determine whether the addition of postoperative thyroid supplements to a hypocaloric diet will decrease the incidence of PH in children during the first six postoperative months. Forty-six patients, aged 0.2 to 4.5 years, were enrolled in a prospective, randomized study. Twenty-four of the children underwent thyroid resection (thyroidectomized group, T) and 22 were healthy before and after elective tonsillectomy and adenoidectomy (control group, C). The children were given two different dietary interventions consisting of a hypocaloric (25% less than the normal daily intake) diet plus tablets containing 100 or 200 mcg/kg of levothyroxine sodium once per day. Thyroid function tests and anthropometric measurements were assessed six times over the first six postoperative months. Biochemical hypothyroidism occurred in seven of the 24 children in the T group, whereas none of the children in the C group developed hypothyroidism. The supplementation of thyroid hormones increased the body weight by an average of 0.5 kg in the T group during the first six postoperative months. The mean thyrotropin levels in the T group were

significantly lower than in the C group, and the free thyroxine levels showed a different pattern: After six months the free thyroxine levels were significantly higher in the T group compared to the levels in the C group. The higher basal levels and the decrease in the thyrotropin levels over time in the T group suggest that the children with hypothyroidism in the T group experienced a greater reduction in thyroid activity due to the thyroid resection. 4 * s - 7 8 , 2
