A: Find the fix & temporary solution!!! Actually the problem is with MacOS Catalina, on MacOS Mojave sound work fine, for now you should change to your old macOS and install Catalina (so another problem solved), in my case i had to change mac to Mojave, open settings/date&time/clock&calendar/general/software&updates/installed and uninstall Catalina. Good luck! Generally, an electromagnetic contactor has an output shaft connected to a load, such as an electric motor. The output shaft is provided with a plurality of radial grooves formed on its outer peripheral surface. The grooves are meshed with a core provided at an end of an armature of the contactor. When the output shaft rotates, the armature rotates in conjunction therewith. As a result, the armature is in contact with a switch arranged at an end of the armature. Thus, the contactor is in a connected state (on state) or an disconnected state (off state). That is, the contactor can switch a load from the connected state to the disconnected state or vice versa. Conventionally, the structure of a contactor includes the following. That is, the contactor includes a conductive contact piece formed by plating a silver core with a silver plating layer and a copper coil formed by winding a copper wire around the core. The conductive contact piece is provided to contact a switching contact arranged at an end of an armature. The contactor further includes a fixed contact which is disposed in contact with the conductive contact piece. The fixed contact is made of tungsten carbide. The armature is formed by combining a hub, an internal armature, and a switch. The hub has a disk shape including a central fixed contact portion formed on a central region thereof. The internal armature is formed integrally with the hub and located at the central fixed contact portion. A shaft having a disk shape is rotatably supported on the hub. The shaft is provided with a plurality of radial grooves, which are meshed with the core of the contactor. The switch is provided to close or open and connect the output shaft to the fixed contact. The switch is made of a solid or sheet of material, such as stainless steel. In the known electromagnetic contactor, the armature in which the switch is arranged has a large specific gravity. Therefore, the contactor is likely to c6a93da74d
