VB6 Help Files Only, Visual Basic 6.0 MSDN

the problem was that i had downloaded the version that had a file called sp6.exe in the root folder with a long string of numbers/letters before/after it, i.e., sp6-1.exe. the files that i downloaded had the standard name sp6.exe and no extra files. i was able to use the proper msdn library, and i was able to find the help for vb6 on the download site. i was able to download the c:\program files\microsoft visual studio 9.0\msdn\vbrpt\msdnhelp\vb6 directory from the download site and extracted the directories out of it to c:\program files\msdn\vbrpt. i then ran the install.cmd file. it worked fine. the symantec endpoint security 12 raises a warning for this install.cmd file, but the install went through cleanly, without any viruses being detected. after it installed and ended, i had

the help files installed, and i also had an updated copy of the help files i downloaded from the download site. i am going to try to figure out what the warning is about. the problem i ran into was that the only version of sp6 still available on the net is for the enterprise version of visual studio, but i was trying to install the pro version. your tool expects to find pro files in the sp6 folder, so it would give a file not found error when attempting to install sp6. i am still unable to find a pro version of the sp6 patch, but running the enterprise version manually seems to work. if you end up needing to re-

install/download the msdn help for vb6, you can easily download the proper copy of msdn that works with visual basic 6 (vb6) but you need a msdn subscription to do. if you have that subscription, here is a step-by-step description of how to find, download, extract, install and testthe correct msdn library that works with vb6 (using the f1 context sensitive help method of vb6 /studio): 5ec8ef588b
