7 days ago - 3 Build 102651 2021. Please note that X-Lite does not come with a voice, video, or messaging service - you must pair it with a VoIP or IP service. If you're already using the messaging service, you don't need to do anything more than upgrade X-Lite if you want to use VoIP and IP services. In most cases, your messaging service should automatically detect if you are using VoIP services and offer to use them when you install them. A service that requires an IP usually prompts you to select what type of service you want to use and then allows you to check the box to use it if available.
