I am thinking if there is a tool that could be used to create a mockup of a graphical interface, but I would like to know if this would work for most of my interfaces. Also, as the amount of the screen real-estate is different for each device, any ideas on how to allow for that? I am thinking of creating a device specific layout and having that set as the default for all other layouts? Perhaps using absolute positioning and limiting the size to the device limits as opposed to pixel based? A: It's a little bit overkill for what you want, but the tool it's the Sketch app. It's very easy to use, the interface isn't too intrusive and it's free. #ifndef BOOST_SERIALIZATION_EXCEPTION_HPP #define BOOST_SERIALIZATION_EXCEPTION_HPP //
